Kirsten Ampt, post doc, Radboud Universiteit Nijmegen:

"While during a lecture you can be told that certain decisions are important you really learn the effect of such decisions during the simulation courses. It helped me to understand the industrial process as well as the different way of thinking within industry. In the beginning of the week you start off with six individuals but by the end of the week you're a team that is working together to achieve one goal.

It is a very intensive, exhausting, but useful week in which you get to work on skills such as working in a team, making flowcharts and giving presentations. Really worthwhile."

Mendel Haag, post doc, Erasmus Medisch Centrum Rotterdam:

"The Drug Discovery Simulation course provided me with in-depth knowledge on the drug discovery process, as well as on the strategies and stakes that need consideration by companies undertaking drug discovery activities. The course leads to the appreciation and understanding of the individual efforts made by the various disciplines involved at the each step in the drug discovery cycle.

Working enthusiastically together as a team towards a drug development candidate we sometimes had to remind ourselves that this was a 'simulation', not reality. The program committee did an excellent job at achieving this."
